

IN THE SPECIFICATION:

Please amend the specification as follows.

Please add the following paragraph between the second and third paragraphs of the Summary of the Invention.

C2 A method of deploying components of a site between systems in a portal framework includes collecting at least one object of a component of a site designated for export as an export file and collecting the export file into a group export file. The group export file is transferred to a system at a remote location. The export file is extracted from the group export file and each object is extracted from the export file to a location on the system at the remote location. The object includes a non-file asset configured to operate on the system at the remote location.
